

YAMATRACK

Powered by iGolf™

Yamaha and iGolf partnered to develop a plug and play wireless solution to control your entire Yamaha Golf Car Fleet. Once plugged in, the device turns any Yamaha Golf Car into a smart car providing real-time tracking, live diagnostics and all the necessary commands to control your car. Whether your needs are monitoring individual cars, slowing them down or troubleshooting maintenance alerts you now control your entire fleet. This is the beginning of a new affordable revolution in smart car fleets.

GOLF COURSE BENEFITS

- 24/7 GPS Tracking
- Pace of Play Calculations
- Customized Geo-Fence areas for Safety & Security
- Battery and Control Unit Diagnostics
- Usage Reports and Golf Course Trends
- Maintenance Alerts
- Shutdown Capability

YAMATRACK

We developed a cellular wireless based GPS device capable of reading and accessing Yamaha's Golf Car control unit. This device communicates with a secure enterprise level platform allowing fleet operators access and control of their cars through a web-based application called iGolf DNA.
